

ROBIS-Online Course

Beyond Orbit is part of a consortium that developed Robotics in Space - ROBIS.

This course is funded by the EIT Deep Tech Talent Initiative of the European Institute of Innovation and Technology (EIT).

ROBIS is a 50h online asynchronous course dedicated to technologies driving space exploration and their impact on our daily lives.

With a focus on robotics, satellites, advanced materials, and cybersecurity, it brings together the latest advancements in deep tech to explore how humanity ventures to the Moon, Mars, and beyond.

Robotics in Space has 4 modules (total 50h):

Module 1: Robotics in Planetary Exploration

Module 2: Satellites and Launchers, how to reach space

Module 3: Advanced Materials for Planetary Robotics

Module 4: Cybersecurity Principles and Applications in Space

The course is FREE and has limited participant number. Please share it with the student network as it may be interesting to complement their studies.
